Waters of Mountains

We know about waters. Today we present the natural mineral water that is bottled under our brand "Luxía" from the most select mountain aquifers in the country.

The water is packaged without transformation, disinfection or filtering, as it comes out of the ground.

Just as nature has enriched it in minerals throughout its history in its journey through the underground layers of the earth.

It is the fruit of a natural process that is simply bottled keeping all its natural properties. These properties are constant since they depend on the mineral composition of the aquifer, which does not vary.

They are waters of weak mineralization, indicated for diets low in sodium and the preparation of infant foods.

Our waters have their corresponding declaration of natural mineral.

Fernando Nevado
CEO JAIA

THE BEST WATER

Not all types of water taste the same, not all have the same composition.

Natural mineral water, the one that underlies the bowels of the earth, provides several health benefits.

Choosing the most appropriate water is a success.

Análisis Químico (mg/l.) (*)

290.0	BICARBONATES They facilitate digestion and neutralize stomach acidity	67.8	CALCIUM Indispensable for bones and teeth, coagulation and sending nerve impulses to muscle cells.
10.8	SULPHATES Sulfates are sulfur salts. They help the liver in detoxification and help digestion by stimulating the gallbladder.	30.0	MAGNESIUM Acts in numerous metabolic functions. Activates enzymes to supply energy.
36.5	CHLORIDE They regulate the water balance and form a constituent of the fundamental gastric juice for proper digestion.	9.2	SODIUM Important to regulate tissue tension, water balance and muscle contractions.
0.2	FLUORIDES It helps prevent cavities and is essential for a strong enamel, while also strengthening the bones.	2.3	POTASSIUM It regulates water balance, muscle functions, nerve functions and acid-base reactions.
0.01	YODURS Participates in the metabolic processes of thyroid hormones.	0.2	STRONTIUM This element seems to increase the absorption of calcium in the bones
230 mg.	DRY RESIDUE AT 180°C	0.03	IRON It participates in the formation of red blood cells and allows blood to absorb and transport oxygen.
	ANALYSIS CARRIED OUT BY THE LABORATORY OF DR.OLIVER RODES.	13.2	SÍLICA Silica reduces the risk of heart disease and can prevent osteoporosis, helps repair tissue, serving as an antioxidant.

(*) Chemical analysis of water average of one of our springs and the health benefits of its composition

Bottling Plants

For a greater guarantee, the bottling plants of the springs that we manage are in the location of the springs themselves.

The concessions and the declarations of the springs as Natural Mineral Waters are for long renewable years with which we can guarantee the long-term supply.

Currently the evolution and technological development has allowed us to grow in the market with several production lines with important capacities in the different springs under our commercialization.

In progress we have planned new production lines for the generation of new packaging formats and other derivative products, in addition to other springs that add to our offer.

Co-Packing

If you want to outsource your production, either because you want to expand your product portfolio or because you lack the infrastructure and / or the technical knowledge necessary to carry out what fits with your business vision, there's no problem!

In JAIA we offer the possibility to other springs to undertake a CO-PACKING project together, we can be your CO-PACKER.

White Label and DB

In addition to marketing our own brands, in JAIA we support private labels and trademarks. If you are a chain of the Great Distribution, a dealer brand (DB) or a chain of restoration, we can develop the product and the format under the specifications you require.

There is also the possibility to create your own brand or use an existing one to work exclusively with a customer or market.
